Day 1

Git and Codex

Service Desk Lite

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Exercise 1

Open the project and record a first snapshot

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Service Desk Lite

Employees submit and track their own requests

Git records how we change the app

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Local project

The project folder defines the work area

The right files give Codex the right context

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Markdown documents

Plain text can become a clear document

Like a recipe: headings, lists and steps help readers follow

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Markdown source and preview

Source

Repository

A repository stores the project's history

Current files show what exists; history shows what changed

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Working tree

The working tree is the files you edit

Editing a file does not create a commit

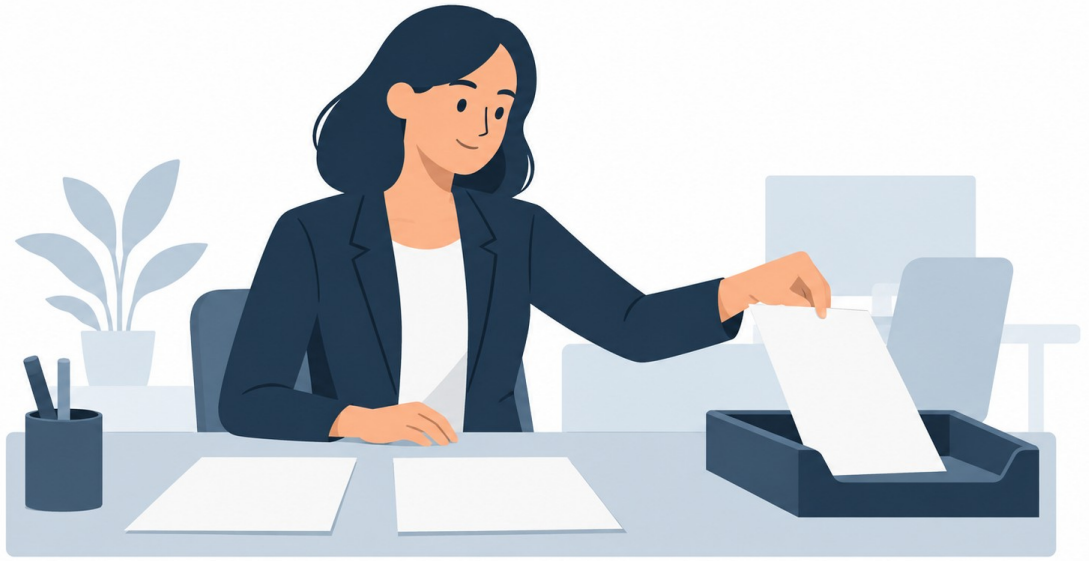

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Staging area

Staging selects the next commit's contents

Keep one change separate from unfinished work

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Commit

A commit records a traceable snapshot

Its message explains the change

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Git identity

An author name helps trace each commit

Git identity and GitHub sign-in serve different purposes

© 2026 Teerasej Jiraphatchandej. All rights reserved.

What belongs in Git?

Track source code and shared documents

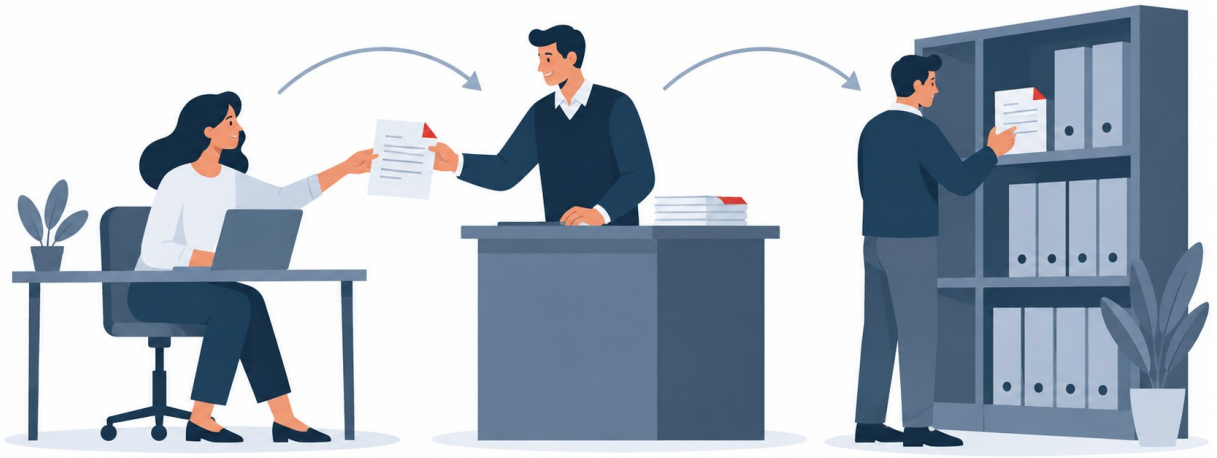

Keep secrets and generated files out of history

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Exercise 2

Change text with a branch and PR

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Local and remote

Local history lives on your computer

A remote is another repository you exchange history with

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Push and pull

Push sends commits to a remote

Pull brings remote changes into the local branch

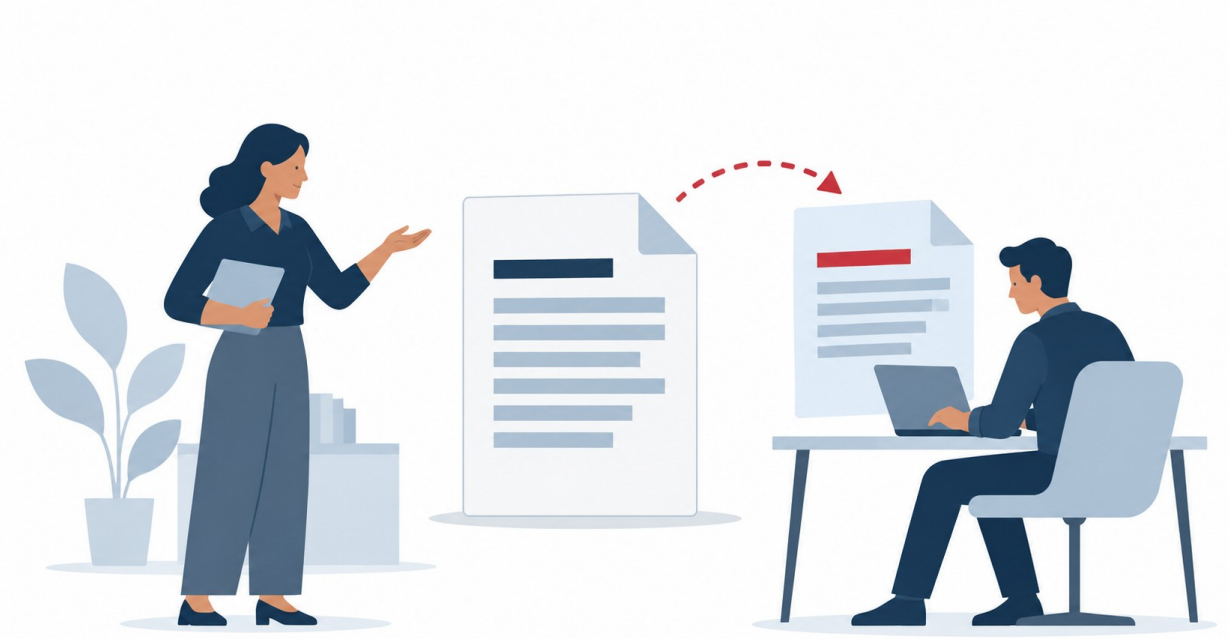

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Branch

A branch keeps a separate line of work

The main branch stays in place while you make changes

© 2026 Teerasej Jiraphatchandej. All rights reserved.

One focused change

Small changes are easier to review

Unrelated edits make the purpose harder to see

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Diff

A diff shows additions and deletions

The changes should match the agreed goal

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Pull request

A pull request proposes a merge

Context and checks help the team decide

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Review

Review checks correctness and scope

Extra changes can add avoidable risk

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Merge

A merge joins lines of work

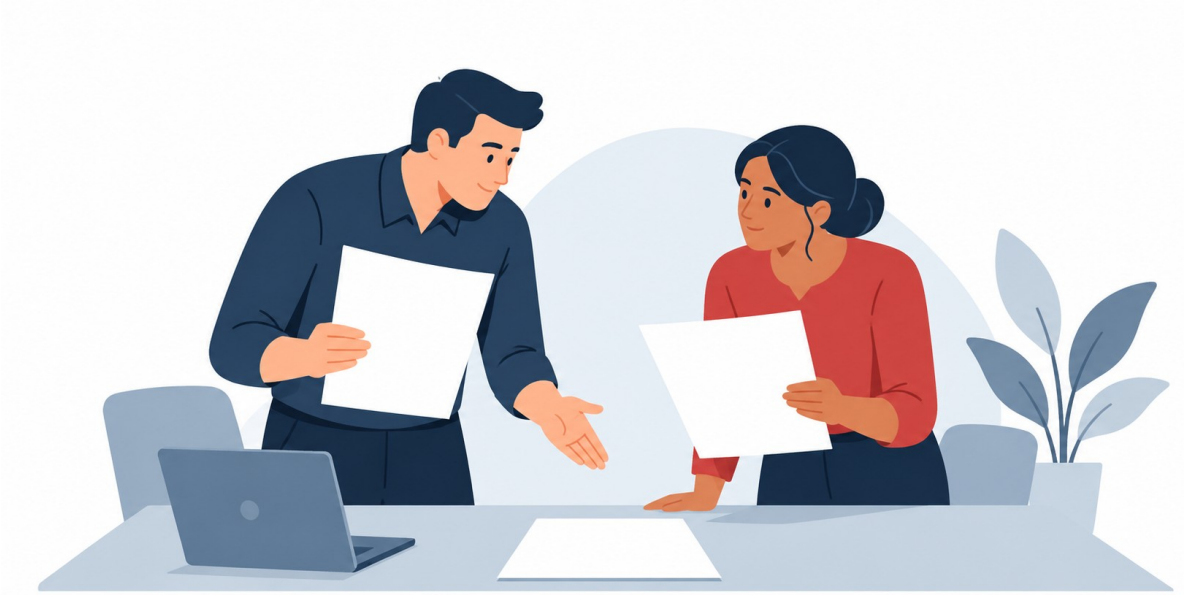

Your local main may still need the merged changes

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Exercise 3

Merge edits to the same line

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Common ancestor

Two branches can share a starting point

That shared version helps explain each change

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Automatic merges

Git can combine many independent edits

A clean merge still needs a meaning check

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Merge conflict

Some edits cannot be combined automatically

A person must decide the final content

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Current and incoming

Each side of a conflict has a source

Its position on screen does not make it correct

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Conflict markers

Markers identify unresolved content

They do not belong in the finished file

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Choose the right meaning

The final text must meet the requirement

The answer may use one side or parts of both

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Check the merged result

Removing markers is only one check

The content and existing behavior must still work

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Conflicts and teamwork

A conflict reveals overlapping work

History and discussion help resolve it

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Exercise 4

Set working rules for Codex

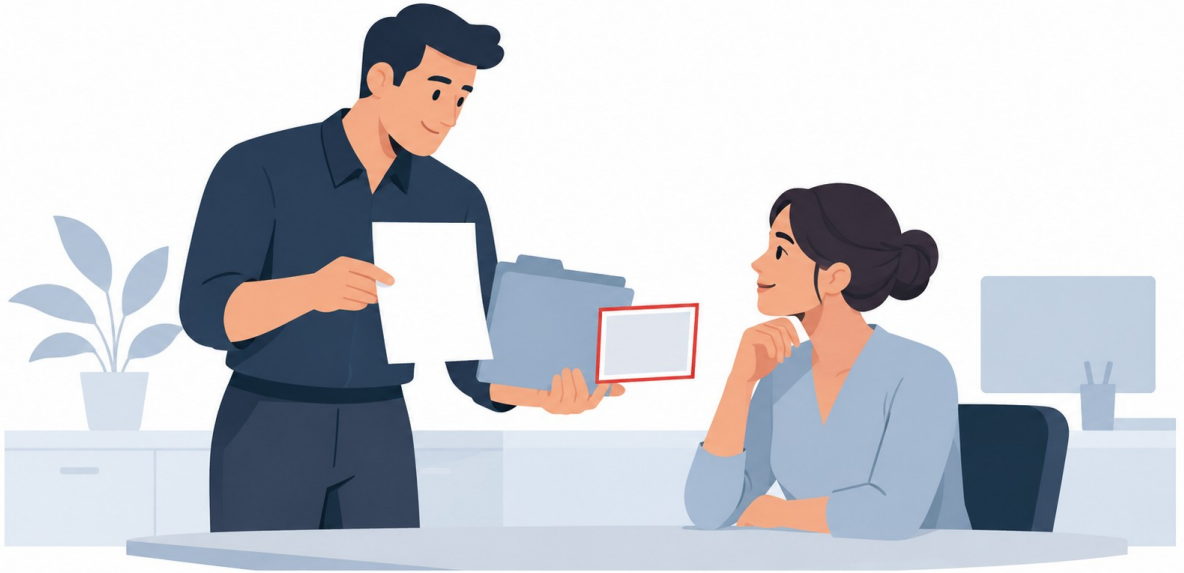

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Goal, context and constraints

The goal states the result you need

Context and constraints define the boundaries

© 2026 Teerasej Jiraphatchandej. All rights reserved.

AGENTS.md

Shared project rules live in one file

They help keep expectations consistent

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Plan before editing

A plan shows the order and expected results

File changes should follow the agreed work

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Diff and evidence

The actual change may differ from its description

Checks show what the result really does

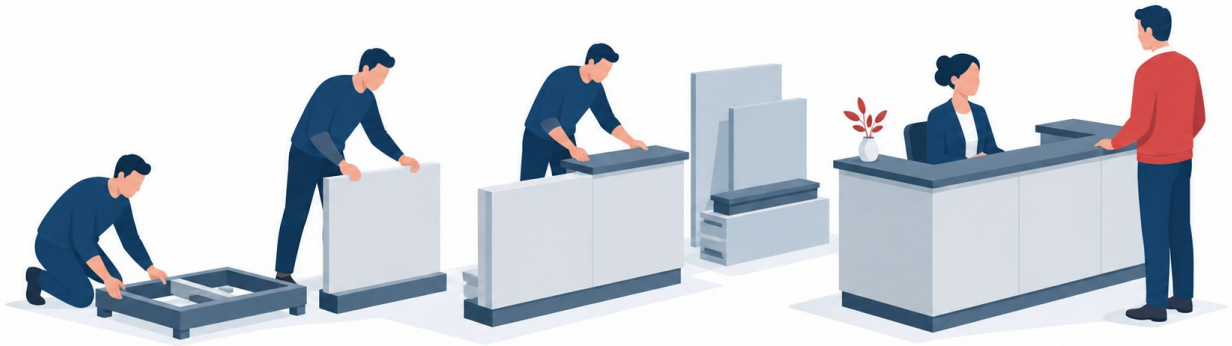

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Backlog

Break a large goal into testable outcomes

Dependencies guide the order of work

© 2026 Teerasej Jiraphatchandej. All rights reserved.

Review log

Separate verified results from open work

The next person needs an accurate handoff

© 2026 Teerasej Jiraphatchandej. All rights reserved.

A traceable way to build

Know what changed and why

Codex helps with the work; the team judges the evidence

© 2026 Teerasej Jiraphatchandej. All rights reserved.
